

Measuring software M2

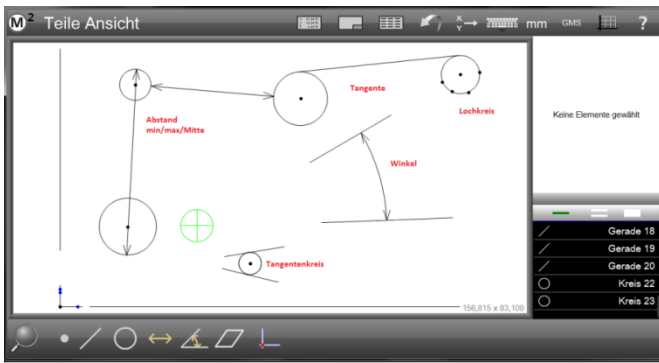

The measuring software M2 is the right tool to be used directly at the production place.

The system contains all necessary functions for 2D and ½ measurements and can also quantify highness differences on the vertical Z-axis.

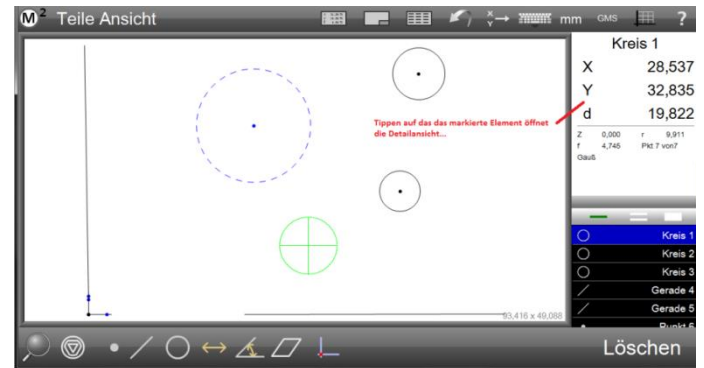

Different measuring panels (overall and partial displays, results report, metrology record) assure an efficient measurements control.

The control processes are automatically programmed with the first work piece inspection. Measurement values are integrated in clear reports (based on DIN and ISO norms) and data can be exported via the USB or Bluetooth ports.

Measuring functions

- Point • Line • Radius • Circle • Angle (vertex point) • Minimum / maximum • Form
- Rotary axis • Incremental / absolute • Intersection • Constructions • Creation of element

Optional

Switch pedal: ACL-018508
