

OptiMIC Microscopes

Microscopes are non-contact measuring instruments. They allow to visualize the edges of a part or to position it without constraint. A very wide range of reticles will allow you to superimpose crosses, concentric circles, graduations according to your specific needs. This document represents only a small part of our range, our specialty being to offer specific solutions to our customers' needs.

- Robustness.
- Fixed or adjustable optics in their magnifications.
- No electronics to manage.
- Attachment on the tube \varnothing or with chuck mounts aligned with the optic axis.
- High durability.
- Wide range of reticles available.

Comparison of chuck mounted microscopes

		Field of view range [mm]	Magnification range	Interchangeability of lenses at the end of the lens	Chuck mount	Built-in LED illumination	Angle between optical and ocular axis	Ocular distance to optical axis [mm]	Elbow height [mm]		
MA 111		Ø1.3 - Ø13.8	100X - 10X	yes	M20x0.75	no	90°	125	77		
MA 112							120°	110			
MA 112-2								150			
MA 112-2E							yes	150		75.5	
MA 117E-2		Ø4.6 - Ø13.8	30X - 10X	no		M20x0.75	yes	170	44		
MA 117SZ-1		Ø5.5 - Ø13.8	25X - 10X					110°	150		
MA 117SZ-2		Ø4.6 - Ø13.8	30X - 10X						170	34.5	
MA 117SZ-3		190									
MA 121C-010		Ø4.4 - Ø13.4	30X - 10X	no			M9x0.5	no	90°	163	30
MA 118-020		Ø5.7 - Ø6.9	25X - 20X						110°	97	22

Comparison of tube microscopes

	Field of view range [mm]	Magnification range	Interchangeability of lenses at the end of the lens	Zoom	Angle between optical and ocular axis	Ocular distance to optical axis [mm]	Tube length [mm]	Tube material		
MA 113-110 	Ø1.3 - Ø13.8	100X - 10X	yes	no	120°	90	110	Aluminum		
MA 116-110 					90°	85				
MA 118-110 					135°	75	110			
MA 121-110 	180°	0			110					
MA 130GW-110 	Ø2.2 - Ø22.5	100X - 10X					97		Steel	
MA 130GW-Z1 	Ø1.7 - Ø85.2	130X - 3X			yes	120°	119		43.5	Aluminum
MA 130W-110 	Ø2.2 - Ø22.5	100X - 10X			no		103		110	Steel
MA 130W-Z1 	Ø1.7 - Ø85.2	130X - 3X			yes		120		43.5	Aluminum

Reticles

For small field of view microscopes of types MA 111 to MA 121

	R 1 cross 12 circles		R 3 cross graduation		R 14 gap
	R 1-1 cross 14 circles		R 3-4 cross graduation		R-M 100 horizontal divisions
	R 1-2 cross 23 circles		R 4 cross 32 circles		R-M-1 100 vertical divisions
	R 1-2-2 cross 23 circles		R 5-7 cross angles		R-M-6 cross 100 horizontal divisions
	R 1-4 cross 30 circles		R 6 cross		R-M-11 150 horizontal divisions
	R 1-4-1 cross 60 circles		R 6-1 fine cross		R-M-12 120 horizontal divisions
	R 1-8 cross 50 circles		R 13 cross angles grid pattern		R-M-17 200 horizontal divisions

For large field of view microscopes of type MA 130 (W)

	R 2-1-4-2 cross 38 circles		R 9a cross		R-M-5 cross 200 horizontal divisions
	R 7 cross 17 circles		R 13-3W angles grid pattern		
	R 3-4W cross graduations		R-M-4 200 horizontal divisions		

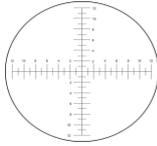

Calibrations

This table shows the space between two circles or between two division lines.
 Practical divisions can be obtained for the other reticles by adjusting the magnification.
 The reticles are not interchangeable.

Description

We have 2 large families of microscopes:	
Microscopes with "small field of view":	They are generally used to position a part. Their size is small but they do not reach large fields of view.
Microscopes with "large field of view":	They are generally used to observe a part. Their fields of view are higher but they are more cumbersome. They are designated by a "W".

These 2 families can include different specificities:	
Mounts :	<div style="text-align: center;"></div> <p>On cylindrical chuck mounts (75-...) or tapered chuck mounts (70-...). See large choice on the last page.</p>
	On tube, fixed on a rigid Ø between the elbow and the lense. Green part on figure B.
Oculars (OCU) :	<div style="text-align: center;"></div> <p>This refers to the part of the microscope where the eye is resting. This element is adjustable and adapts to the vision of each human being.</p>
Elbows :	<div style="text-align: center;"></div> <p>They have different angles in order to correspond as well as possible to the ergonomics of each workstation. 90° = MA 116 / 110° = MA 117 120° = MA 113 and MA 130 / 135° = MA 118 180° = MA 121</p>
Illuminators (LED) :	<div style="text-align: center;"></div> <p>They are optional and can be mounted on the lens.</p>
	Some are integrated into the microscopes and have the advantage of reducing the size of this construction. They are designated by the letter "E".
Goniometers :	<div style="text-align: center;"></div> <p>Most of our microscopes do not include them but we can, upon request, adapt them to almost all our models. This angle measuring instrument is designated by the letter "G".</p>
Lenses (OBJ) :	<div style="text-align: center;"></div> <p>They can be interchanged. You can buy a microscope and several lenses. This applies to: MA 111 / MA 112 / MA 112 / MA 112-2 / MA 113 / MA 116 / MA 118 / MA 121</p>
	They can be integrated into the microscope. This applies to: MA 112-2E / MA 117SZ / MA 117SZ-E
	They can be "zoom". This allows the field of view to be changed without changing the working distance. These optics are designated by the letter "Z".
Reticles (R...) :	<div style="text-align: center;"></div> <p>Reticles for microscopes with small fields of view are usually supplied with R1 reticles (cross and 12 circles).</p>
	Reticles for microscopes with large fields of view are usually supplied with R2-1-4-2 reticles (cross and 38 circles).
	Other reticles are also available. Caution: reticles are not interchangeable.
	Special versions: Other reticle versions are available according to customer specifications. However, they do require a financial contribution for the preparation cost.
